

③ describe characteristics of computer.

1. Speed:- computers compute is the fastest device and can perform various task at very fast. The speed of the computer is calculated in 3 to 4 million data processing per second. Speed is calculated in milli second, micro second, nano second, or pico second per data processing.

1 Sec.

= 1000 Mili. Second

1 milli second

= 1000 micro second

1 micro second = 1000 nano second

1 nano second = 1000 Pico second.

② Accuracy:- The word accuracy means correctness of

any particular result. A computer can never misguide a user in any result unless and until user give incorrect data.

③ Diligence:- A computer never suffers stress or tiredness hence can work for hours without creating any error.

4. Storage:- The most important feature of computer is storage. A computer can store large amount of data and can retrieve fetch it when and where required very easily unlike human cannot do it. For example - A dictionary, encyclopedia, or all the world news - can store in a computer memory and can be fetched.

5. Versatility:- one of the most exciting features of computer is versatility. A computer can perform multiple works at the same time & at same speed. Example computer can retrieve information of an employee working since last 15 years in a company & make the salary sheet of the current employees at some timeframe simultaneously.

⑥ Power of remembering:-

A computer can remember any information stored in its memory speedily at any time

but human cannot do it. example - computer can
retrieve the last 5 years investment records

but human cannot do so.
