

3. Describe characteristics of computer.

Ans. 1. Speed ÷ computer is the fastest device and can perform various tasks at very fast. The speed of the computer is calculated in 3 to 4 million data processing per second. Speed is calculated in milli second, micro second, nano second or pico second per data processing.

1 second = 1000 milli second

1 milli second = 1000 micro second

1 micro second = 1000 nano second

1 nano second = 1000 pico second

2. Accuracy ÷ the word accuracy means correctness of any particular result. A computer can never misguide a user in any result unless and until user give in correct data.

3. Diligence ÷ A computer never suffers stress and tiredness hence can work for hours without creating any error.

4. Storage ÷ the most important feature of computer is storage. A computer can store large amount of data and can retrieve/fetch it when and where required very easily unlike human cannot do it.

5. versatility ÷ one of the most exciting features of computer is versatility. A computer can perform multiple works at the same time & at same speed.

6. power of remembering ÷ A computer can remember any information stored in its memory speedily at any time but human cannot do it. Exp: computer can retrieve the last 5 years investment records but human cannot do so.
