

(3) Describe characteristics of computer?

* Speed

Computer is the fastest device and can perform various tasks at very fast. The speed of the computer is ~~calculated~~ calculated in 3 to 4 million data processing per second. Speed is calculated in milli second, Nano second or Pico second per data processing.

1 sec = 1000 milli - second

1 milli second = 1000 micro second

1 micro second = 1000 Nano second

1 Nano second = 1000 Pico second

Accuracy

The word accuracy means correctness of any particular result. A computer can never misguide a user in any result unless and until user give incorrect data.

Diligence

A computer never suffers stress or tiredness hence can work for hours without creating any error.

Storage

The most important feature of computer is Versatility. A computer can store large amount of data and can retrieve / Fetch it when and where required very easily unlike human cannot do it ~~for example~~.

Versatility

One of the most exciting features of computers is versatility. A computer can perform multiple work at the same time & at same speed. Example:- computer can retrieve information of an employee working since last 15 years in a ~~computer~~ company & make the salary sheet of the current employees at a same time frame simultaneously.

Power of Remembering

A computer can remember any information stored in the memory. Speedily at any time but human cannot do it. Example:- Computer can retrieve the last 5 years investment records but human cannot do so.

I.Q intelligence Quotient

A computer cannot make decision by itself but a human can do this. In this regard only a human defeat the computer.

Example → If we instruct a human to destroy a data of an office without any reason then human think first but never do it directly but a computer can do so ~~immed~~ immediately.
