

③ Describe characteristics of computer?

* Speed

Computer is the fastest device and can perform various tasks at very fast. The speed of the computer is calculated in 3 to 4 million data processing per second. Speed is calculated in milli second, Nano second or pico second per data processing.

1 sec = 1000 milli second

1 milli second = 1000 micro second

1 micro second = 1000 Nano second

1 Nano second = 1000 pico second

Accuracy

The word accuracy means correctness of any particular result. A computer can never misguide a user in any result unless and until user give incorrect data.

Diligence:-

A computer never suffers stress or tiredness hence can work for hours without creating any errors.

Storage:-

The most important feature of computer is versatility. A computer can store large amount of data and can retrieve / Fetch it when and where required very easily unlike human cannot do it.

Versatility

One of the most exciting features of computers is versatility. A computer can perform multiple work at the same time and at same speed.

Example :- Computer can retrieve information of an employee working since last 15 years in a computer & make the salary

sheet of the current.
employees at a same time frame
simultaneously.

Power of Remembering:-

A computer can remember any information stored in the memory speedily at any time but human cannot do it. Example:- computer records but human cannot do so.

I. Q Intelligence Quotient:-

A computer cannot make decision by itself but a human can do this in this regard only a human defeat the computer.

Example :-> If we instruct a human to destroy a data of an obbice without any reason then human think first but never do it ~~diff~~ directly but a computer can do so immediately.
