

3. Describe characteristics of computer.

a. Speed:- Computer is the fastest device and can perform various tasks at very fast. The speed of computer is calculated into 3 to 4 million data processing per second. Speed is calculated in Milli second, Micro second, Nano Second or Pico second per data processing.

b. Accuracy:- The word accuracy means correctness of any particular result. A computer can never misguide user in any result unless and until user give incorrect data.

c. Diligence:- A computer never suffers stress or tiredness hence can work for hours without creating any error.

d. Storage:- The most important feature is storage. A computer can store amount of data and can retrieve / fetch it when and where required very easily unlike human cannot do it.

E. Versatility :- One of the most exciting feature ~~is~~ of computer is versatility. A computer can perform multiple work at the same time & at same speed. Example :- Computer can retrieve information of an employee working since last 15 years in a company & making the salary sheet of the current employees at same timeframe simultaneously.

F. Power Of Remembering :- A computer can remember any information stored in its memory (speedily) at any time but human cannot do it. Example, computer can retrieve the last 5 years investment records but human cannot do so.

G. I.Q. (Intelligence Quotient) :- A computer cannot make decision by itself but a human can do this. In this regard only a human defeat the computer.
